DETAILED ACTION

1. This communication is in response to applicant's amendment filed May 15, 2006. Claims 9-11, 34-35, and 38-40 have been amended. Claims 2-4, 6-20, 27-29 and 34-40 are currently pending in this case.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 13, 2006 has been entered.

Response to Arguments

- 3. Applicant's arguments, see applicant's amendment, filed May 15, 2006, with respect to the section 112 rejections of claims 2-4, 6-20, 27-29 and 34-40, as currently amended, have been fully considered and are persuasive. The section 112 rejection of claims 2-4, 6-20, 27-29 and 34-40 has been withdrawn.
- 4. Applicant's arguments with respect to the section 103 rejections of claims 2-4, 6-20, 27-29 and 34-40 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103 LOCA TRIO

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

tions,of - , $\omega \in \mathbb{R}$, $\omega \in \mathbb{R}$, \mathbb{R} / 29 an \mathbb{R} 24-4

Art Unit: 3621

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 6. Claims 2-4, 6-20, 27-29 and 34-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Onodera et al (US 6700677) or Holmes et al (US 6119108) in view of Auerbach et al (US 5673316) and Shima (US 6369909).
- 7. Regarding claim 34 –

Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col., I,; ,lines, .40-65,, claims 1-8) or Holmes (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) discloses printing system including a server that protects copyright and includes encryption control substantially as claimed. Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts. Shima (See, e.g., Figs. 14, 19, Col. 6, lines 50-65, and Col. 21, lines 5-20) shows security level queries and control of network printers as being old and obvious (Note Epson assignee).

- 8. It would have been obvious to the person having ordinary skill in this art to provide a similar arrangement for Onodera or Holmes because the encryption control of Auerbach provides a much finer level of control of an electronic document because it caters to a multiplicity of users that may not need the entire document and therefore expands the market and provides greater levels of revenue, to the copyright holder.
- 9. Regarding the protection limitations of claim 2 –
 Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col. 1, lines 40-65, claims 1-8) or Holmes (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Cola 3, lines 10-50, claims 1-46),

11.

disclose a printing system including a server that protects copyright and includes encryption control that is a functional equivalent of the claim limitations.

Regarding the output limitations of claim 4 –

- 10. Regarding the encryption limitations of claim 3 –

 Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts that is a functional equivalent of the claim limitations.
- Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col. 1, lines 40-65, claims 1-8) or Holmes et al (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) disclose a printing system including a server that protects copyright and includes 16.4

encryption control that is a functional equivalent of the claim limitations.

- 12. Regarding the printing limitations of claims 6-8 –

 Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col. 1, lines 40-65, claims 1-8) or Holmes (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) disclose a printing system including a server which protects copyright and includes encryption control which is a functional equivalent of the claim limitations because the elements are conventional component of a standard printing system.
- 13. Regarding the protection limitations of claims 9-20 = 40-65, claims 1-3) or Holmes-Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts that is a functional equivalent of these claim limitations.
- 14. Regarding the protection limitations of claims 27-29 Millian State Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts that is a functional equivalent of the claim limitations.

man mount of the control of the cots hoplying it a

a will be is a turnof anal conductant or the claim limitations according

Art Unit: 3621

15. Regarding the system limitations of claims 35-37 –

Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts that is a functional equivalent of the claim limitations.

16. Regarding claim 38 -

Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col. 1, lines 40-65, claims 1-8) or Holmes (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) discloses printing systems including a server that protects copyright and includes encryption control substantially as claimed. Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims I-8) shows encryption of document parts. Shima (See Figs. 14, 19, Col. 6, lines 5.0-65, and Col. 21, lines 5-20) shows security level queries and control of network printers as being old and obvious (Note Epson assignee).

- 17. It would have been obvious to the person having ordinary skill in this art to provide a similar arrangement for Onodera or Holmes because the encryption control of Auerbach provides a much finer level of control of an electronic document because it caters to a multiplicity of users that may not need the entire document and therefore expands the market and provides greater levels of revenue to the copyright holder.
- 18. Regarding claim 39 –

Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col.- 1, lines 40-65, claims 1-8) or Holmes (See, e.g., abstract, Figs. 1 and 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) discloses printing system including a server that protects copyright and includes encryption control substantially as claimed. It is noted that it is believed that the copyright controls of the document are functionally equivalent to the claimed limitations.

Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts. Shima (See, e.g., Figs. 14, 19, Col. 6, lines 50-65, and Col. 21, lines 5-20) shows security level queries and control of network printers as being old and obvious (Note Epson assignee).

- 19. It would have been obvious to the person having ordinary skill in this art to provide a similar arrangement for Onodera or Holmes because the encryption control of Auerbach provides a much finer level of control of an electronic document because it caters to a multiplicity of users that may-not need the entire document and therefore expands the market and provides greater levels of revenue to the copyright holder.
- 20. Regarding claim 40 –

Onodera (See, e.g., abstract, Figs. 1, 4 and 5, Col. 1, lines 4065, claims 1-8) or Holmes (See, e.g., abstract, Figs. land 2, Col. 2, lines 5-65, Col. 3, lines 10-50, claims 1-46) disclose printing systems including a server which protects copyright and including encryption control substantially as claimed. It is noted that it is believed that the copyright controls of the document are functionally equivalent to the claimed limitations. Auerbach (See, e.g., Fig. 2, Col. 1, lines 50-65, Col. 5-40, claims 1-8) shows encryption of document parts. Shima (See, e.g., Figs. 14, 19, Col. 6, lines 50-65, and Col. 21, lines 5-20) shows security level queries and control of network printers as being old and obvious (Note Epson assignee).

21. It would have been obvious to the person having ordinary skill in this art to provide a similar arrangement for Onodera or Holmes because the encryption control of Auerbach provides a much finer level of control of an electronic document, because it

caters to a multiplicity of users that may not need the entire document and therefore expands the market and provides greater levels of revenue to the copyright holder.

22. Examiner's Note: Although Examiner has cited particular columns, line numbers and figures in the references as applied to the claims above for the convenience of the applicant(s), the specified citations are merely representative of the teaching of the prior art that are applied to specific limitations within the individual claim and other passages and figures may apply as well. It is respectfully requested that the applicant(s), in preparing the response, fully consider the items of evidence in their entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.
